rush sequence search

Christina, please approve, 2 month amdt.

STIC

10/002784

Please do a commercial database search on SEQ ID NO: 16 and 27.

Please a provide paper copy of the results.

Thanks, Nita M. Minnifield Art Unit 1645 Office CM1-8A07 Mailbox CM1-8E12 703-305-3394

The coding region of this Shg toxin is altered by site directed mutagenesis, introducing 142R mutation, that results in disruption of binding of the toxin to both the HIC class II or T-cell antigen receptor. SPE-A has antibacterial and cytostatic activity. This sequence is useful for the production of SPE-A vaccines and specific antibodies. This vaccine overcomes the disadvantages of the chemically inactivated toxoids and is designed to protect individuals against one or several related staphylococcal and streptococcal toxins. It is used for the diagonals and treatment or amelioration of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the amino acid sequence of the Streptococcus pyogens excitain A (SPE-A toxin). The novel mutant Streptococcal SPE-A toxin has at least least cachange and is nonlethal compared with a protein to wild type SPE-A toxin. The mutant SPE-A toxins are nontoxic and can produce antibodies that neutralise wild type SPE-A toxin activity. The toxins can be used in vaccines and therapeutics to generate a protective immune response against streptococcal infection. They can be used to protect against the development of streptococcal toxic shock syndrome (STSS). In addition, the toxins can be used for treating animals with symptoms of the toxins can be used for treating animals with symptoms of the treatment of cancer. In particular they can be used for treating T cell lymphomas, and ovarian and uterine cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Streptococcus

                                                                                                                                                                                                                               The present sequence is a non-lethal Streptococcus pyogenes Streptococcal toxin A (SPE-A) mutant, which can be used to produce vaccines to protect animals against wild type SPE-A and to treat concer and streptococcal toxic shock syndrome (STSS). The mutant SPE-A concertaints are streptococcal through the syndrome (STSS). The mutant can be used to ameliorate STSS symptoms, e.g. fever, hypotension, and the streptococcal infection, myositis, fascitis and liver damage. The neutralising Ab is preferably administered in the conjunction with antiblotic therapy. The mutant SPE-A is especially useful for treating T cell lymphomas, and overian and tetrine cancer. It is thought that mutant SPE-A can be selectively toxic to T cell lymphoma colls.

The present sequence is a non-lethal Streptococcus pyogenes

Streptococcal toxin A (SPE-A) mutant, which can be used to produce
vaccines to protect animals against which can be used to produce
vaccines to protect animals against which can be used to treat
cancer and streptococcal toxic shock syndrome (STSS). The mutant
SPE-A causes neutralising antibodies (Ab) to be produced, which
may be used to ameliorate STSS symptoms, e.g. fever, hypotension,
yroup A streptococcal infection, myositis, fascitis and liver
damage. The neutralising Ab is preferrably administered in
conjunction with antiblotic therapy. The mutant SPE-A is
especially useful for treating T cell lymphomas, and ovarian and
toxic toxic to T cell lymphoma cells.

M.B. Sequence not given in the specification, but constructed
using the wild type SPE-A sequence given on pages 77-79.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mutant SPE-A toxin with at least one amino acid change is
substantially non-lethal - used in weache composition for
treatment of cancer and streptococcal toxic shock syndrome etc.
                                                                                                                                                                                                                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ohlendorf D;

The mutant to perfect and streptococcal toxic shock syndrame (STES). The mutant toxic shock syndrame (STES) which which may be used to ameliorate STES symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver damage. The neutralising Ab is preferably administered in conjunction with antibiotic therapy. The mutant SPEA is especially useful for treating To cell lymphomas, and oversian and toxic to Tocal lymphoma cells.

No. Sequence not given in the specification, but constructed toxic to Tocal lymphoma cells.

The mutant SPE-A causes neutralishing antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver damage. The neutralishing Ab is preferably administered in conjunction with antibiotic therapy. The mutant SPE-A is especially useful for treating 7 cell lymphomas, and ovarian and uterine cancer. It is thought that mutant SPE-A can be selectively as a converse of the stream of the st

The present sequence is a non-lethal Strepicococcus pyogeness Strepicococcal toxin A (SPEA) mutant, which can be used to produce veccines to protect animals against wild type SpEA and to treat concern and strepicococcal toxic shock syndrome (STSS). The mutant SpEA causes neutralising antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, croup a strepicococcal infection, myostitis, fastitis and liver damage. The neutralising Ab is preferably administered in conjunction with antiblotic therapy. The mutant SPEA is sepecially useful for treating Tocal lymphomas, and overian and totarine cancer. It is thought that mutant SPEA can be selectively toxic to Tocal lymphoma cells.

Sequence not given in the specification, but constructed with stipe SPEA sequence given on pages 77-79.
                                                                                                                                                                                                                                                                                Mutant SPE-A toxin with at least substantially non-lethal - used

                                                                                                                                                            C The present sequence is a non-lethal Streptococcus pyogeness Streptococcal toxin A (SPEA) mutant, which can be used to produce vaccines to protect animals against wild type SPEA and to treat cancer and streptococcal toxic shock syndrome (STSS). The mutant SPEA causes neutralising antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, croup a streptococcal infection, myositis, facitis and liver damage. The neutralising ab is preferably administered in conjunction with antiblocic therapy. The mutant SPEA is sepcially useful for treating To cell lymphomas, and overian and tetrine cancer. It is thought that mutant SPEA can be selectively toxic to Total lymphoma cells.

20 M.B. Sequence not given in the specification, but constructed withing the wild type SPEA sequence given on pages 77-79.

Roggiani M,

Schlievert PM,

The present sequence is a non-lethal Streptococcus pyogenes Streptococcal toxin A (SPE-A) mutant, which can be used to produce vaccines to protect unimals against wild type SPE-A and to treat cancer and streptococcal toxic shock syndrome (STSS). The mutant

neutralising

antibodies

<u>8</u>

to be

produced,

which

Mutant SPE-A toxin with at least one amino acid change is substantially non-lethal - used in vaccine composition for treatment of cancer and streptococcal toxic shock syndrome

etc

The mutant SBEA causes neutralising antibodies (Ab) to be produced, which may be used to amellorate SPES symptoms e 9, fever, hypotension, group A streptococcal infection myositis, fascitis and liver cancer and the neutralising Ab is preferably administered in conjunction with antibiotic therapy. The mutant SBEA and overlan and utile cancer. It is thought that mutant SBEA can be selectively toxic or Teell lymphoma call implomes, and overlan and streptocal toxic or Teell lymphoma to the specification, but constructed the selectively that SBEA can be selectively that SBEA can be selectively that several cancer are a specially cancer and the selectively cancer and selective cancer and selecti

                                                                                                                                                                                                                                                                                                                                                   damage. The neutralising Ab is preferably administered in conjunction with antibiotic therapy. The mutant SPE-A is especially useful for treating T cell lymphomas, and ovarian and uterine cancer. It is thought that mutant SPE-A can be selective toxic to T cell lymphoma cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Streptococcal toxin A (SPE-A) mutant, which can be used to produce vaccines to protect animals against wild type SPE-A and to treat cancer and streptococcal toxic shock syndrome (STSS). The mutant SPE-A causes neutralising antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    vaccine; protection; treatment; cancer; neutralising antibody; streptococcal toxic shock syndrome; STSS; symptom; amelioration; fever; hypotension; oroup A streptococcal infection; myositls; fascitis; liver damage; T cell; lymphoma; ovarian; uterine.

                                  produce artibodies that neutralise wild type SPEA toxin activity. The toxins can be used in vaccines and therapeutics to generate a protective immune response against streptococcal infection. They can be used protect against the development of streptococcal toxic shock syndrome (SPSS). In addition, the toxins can be used for treating animals with symptoms of streptococcal infection or SPSS and in methods for stimulating Teal proliferation and in the treatment of cancer. In particular they can be used for treating Teal Tymphomas, and ovarian
                                                                                                                                                This is the amino acid sequence of the mutant Streptococcus pyogenes exotoxin A (SPE-A toxin). The novel mutant Streptococcal SPE-A toxin has at least 1 as change and is nonlethal compared with a protein to wild type SPE-A toxin. The mutant SPE-A toxins are nontoxic and can

K1735 and CM519 melanoma cells were injected s.c. into nu/nu mice, optionally followed by i.p. injection of CP (100 microg, 24 hours later). The mice were checked twice weekly for tunour growth for 12 weeks, to give results that showed that treatment with CP completely protected atthmic mice against transplanted K1735 melanoma growth, and protected 60% of the mice from developing

An immunoganic peptide derived from the proteese can be used in the proof. of antibody (Ab) and vaccine. Ab is prepid. By introducing the peptide into a mammal, pref. a Mouse, followed by Ab isolation. The Ab or a probe derived from the gene can be used for the diagnosis and detection of gp. A Streptococcus infections, while vaccine, which inhibits streptococcal replication, can be used to prevent and treat gp. A Streptococcus infections, and partic, to ameliorrate pharymitis, to saillitis, post-streptococcal glorentionephitis, sepisis, mannigitis, post-streptococcal glorentionephitis, sepisis, mannigitis, post-streptococcal glorentionephitis, sepisis, mannigitis, cellulitis, fascilitis and toxic shock like syndrome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                         cs streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus youngersaing one of $483 sequences [3]), given in the specification. The proteins have antibacterial and sequences can extinct [1], nucleic acids encoding [1], ARNG614-ARN7185 and proteins that bind [1] are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by streptococcus bacteria, particularly S. apalactiae and S. pyrogenes.

This is a streptococcus becteria, particularly S. apalactiae and S. pyrogenes. The streptococcus in a compound binds to prove the streptococcus in a compound binds to composition comprising [1] are used to detect Streptococcus in a compound binds to composition or disparation of the disease compound by may be used as a vaccius or the tis prevented or treated may be meningitian successive control of the streptococcus that is prevented or treated may be meningitian successive control of the streptococcus of the successive of

The present sequence is given in a specification relating to novel oral bacterial polypeptide referred to as periodontain. The polypeptide has anidolytic activity for cleavage of denatured polypeptides non-denatured scripin polypeptides. It has anidolytic activity for cleavage of a non-denatured human alpha_1-proteinase inhibitor at a reactive site loop region of the inhibitor. Periodontain is useful for inhibiting the peptidase activity and reducting periodontitis, loss of tooth attachment and periodontal pocket formation, and for reducing
                                                                                                                           Novel oral bacterial periodontain polypeptide for diseases, has amidolytic activity for cleavage of alphal-proteinase inhibitor at reactive site loop
                                                                                                                                                                      WPI;

It is useful for protecting an animal from a disease caused by P. gingivalis and for treating periodontal diseases, including gingivitis and periodontitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          427

SPF-A has antibacterial and cytostatic activity This sequence is useful for the production of SPE-A vaccines and specific antibodies. This vaccine overcomes the disadvantages of the chemically inactivated toxoids and is designed to protect individuals against one or several related stabbylococcal and streptococcal toxins. It is used for the disgnosis and treatment or amelioration of superantigen-associated bacterial infections.
The present sequence is the protein sequence of Streptococcus pyogenes vaccine SPEA4. The vaccine differs from the native sequence by substitution of the Leu-42 residue by Arg. This mutation is expected to disrupt contact between the toxin and

SPEA/2 can be expressed as a recombinant protein in Escherichia coll as a secreted protein or as a cytoplasmic product. No indicators of toxicity have been detected for the purified recombinant protein, and vaccine studies demonstrate that SPEA/2 is highly antigenic, inducing protective immunity in a mouse animal model. The attenuated superantigen can be used to protect against superantigen toxin infections. Methods producing and using altered superantigen toxins as vaccines, and in diagnosis and therapy, are provided by the invention. A multival in vaccine consisting of altered superantigen toxins from SRA, SEB, SEC-1, TSST-1 and SPEA is predicted to provide protective immunity against the majority of bacterial superantigen toxins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

SPE A can be used for tumouricidal treatment, esp. with a haemolysin. Synthetic polypeptides having structural homology to Streptococcal pyrogenic exotoxins are claimed, provided the homology includes statistically significant sequence homology, alignment of Cysteine
                                                                  Disclosure;
                                                                                     Treating cancer with enterotoxin from Staphylococcus aureus -
administered by IV injection, having same tumoricidal activity
as Staphylococcal protein A without potential toxic reactions
                                                                                                                                                                                                                  17-JAN-1990;
                                                                                                                                                                                                                                                                                                                  Streptococcus
                                                                                                                                                                                                                                                                                                                                            SPE A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a tumour cell capable of atimulating antitumor immune reactivity in vitro or in vivo contains and expresses an exogenous nucleic acid molecule encoding a superantigen or its active fragment and an exogenous nucleic acid molecule encoding a costimulatory molecule that activates T cells in conjunction with an antigenic stimulus. The invention may be used

The present sequence is the protein sequence of exotoxin A (SPE A) of Streptococcus pyogenes. Similarity is shown, in several streptococcus pyogenes. Similarity is shown, in several streptococcal enterotoxins, streptococcal pyrogenic exotoxins and staphylococcal extoliative toxins (see ABB7623-44). In the present invention, synthetic polypeptides useful in tumour therapy and in blocking or destroying autoreactive r and B lymphocyte populations are characterised by substantial structural homology to staphylococcal enterotoxin A and enterotoxin B and to streptococcal pyrogenic exotoxins, with statistically significant sequence homology and similarity (value of Lipman and Pearson algorithm in Monte Carlo analysis exceeding to include alignment of cysteine residues and similar hydropathy
                                                                                                                                                             Reagent for treating cancer without the comprises a specific V beta subset of T tumor and stimulated with superantigens

profiles. These superantigens are used to treat solid tumours, including their metastases, without rediation, surgery or standard chemotherapeutic agents. A claimed method of human cancer treatment involves contacting haematopoietic cells from a patient with one or more superantigens ex vivo to generate stimulated cells, selecting a specific v beta subset of cells, and reintroducing hese cells into the patient to induce an in vivo therapeutic,

This is the amino acid sequence of the Streptococcus pyogenes exotoxin A (SPEPA toxin). The novel mutant Streptococcal SPEPA toxin has at least 1 as change and is nonlethal compared with a protein to wild type SPEPA toxin. The mutant SPEPA toxins are nontoxic and can produce antibodies that neutralise wild type SPEPA toxin activity. The toxins can be used in vaccines and therapeutics to generate a protective immune response against streptococcal infection. They can be used to protect against the development of streptococcal infection. They can be used for the streptococcal infection or STSS and in methods for stimulating real proliferation and in the treatment of ceneer. In particular they can be used for treating rainals with symptoms of

                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a non-lethal Streptococcus progeous Streptococcal toxin A (SPEA) mutant, which can be used to produce vaccines to protect animals against wild type SPEA and to treat cancer and streptococcal toxic shook syndrome (STSS). The mutant SPEA causes neutralising antibodies (Ab) to be produced, which may be used to emeliorate STSS symptoms, e.g. fever, hypotension, compared to emeliorate STSS symptoms, e.g. fever, hypotension, or group A streptococcal infection, myositis, fascitis and liver damage. The neutralising Ab is preferably administered in conjunction with antiblotic therapy. The mutant SPEA as sepecially useful for treating T cell lymphomas, and overlan and terine cancer. It is thought that mutant SPEA can be selectively toxic to T cell lymphoma cells.

Sequence not given in the specification, but constructed toxic toxic playen in the specification, but constructed toxic standard process of the wild type SPEA sequence given on pages 77-79.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Local :

                                                                                                                                                                                                                                                                                                        The present sequence is a non-lethal Streptococcus pryogeness Streptococcal toxin A (SPEA) mutant, which can be used to produce vaccines to protect animals against wild type SPEA and to treat specific and streptococcal toxic shook syndrome (STSS). The mutant SPEA causes neutralising entibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, croup a streptococcal infection, myositis, factitis and liver damage. The neutralising ab is preferably administered in conjunction with antibiotic therapy. The mutant SPEA is especially useful for treating T cell lymphomas, and overian and tetrine cancer. It is thought that mutant SPEA can be selectively toxic to T cell lymphoma cells.

20 MB. Sequence not given in the specification, but constructed cusing the wild type SPEA sequence given on pages 77-79.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                1136
